

Instructions for TD AMERITRADE (TDA) Data

Updated 5/23/2018

(TD Ameritrade only provides stocks and indices real time data. It does not include Futures and Forex data.)

1. Make sure that you have at least a Windows 7 or later computer with all the Windows Updates installed onto your system. You can download the AbleTrend software from our website, [Download AbleTrend 7.0](#)
2. When you see the log-in screen on the AbleTrend 7.0, click Advanced. Under Choose Your Module, select AMTD. Input your TD Ameritrade username and password on the Username/Password box. Leave the Server and Port fields blank.
3. There are known issues with using the TD Ameritrade data. Some users cannot get real time data due to firewall/internet security software such as Avira, BitDefender, etc. Solutions include uninstalling the security software from your computer or disable Auto Protect or Web Protection. Please contact your firewall/security software vendor for help. AbleSys has no control or support for firewall/security software.
4. Connection with AMTD appears to handle simultaneous requests at a slower pace than making new charts. Loading workspaces may be blank for about a minute before all the data comes in.
5. TD Ameritrade (AMTD) Data: Some users cannot get real time data from AMTD. This may be caused by not signing the Exchange Agreement Forms for your TD Ameritrade account. Here is how to sign up.
 - Go to the TD Ameritrade website, <http://www.tdameritrade.com>
 - After sign in, click on Client Services
 - Click on My Profile
 - Select Real Time Quotes (Level II) and then sign the Exchange Agreements
